Smart Dining — Integrated POS, WhatsApp Ordering & Multi-Channel Payments

ZIMA Solutions Limited is pleased to present this proposal for **Smart Dining** — our restaurant and point-of-sale platform that unifies table service, kitchen and bar displays, **WhatsApp ordering**, reservations, and multiple payment options (cash, mobile money, card, and **payment via WhatsApp**) in one system. This document explains how Smart Dining works for your guests and your team, with visuals to bring the experience to life.

Dear Cape Classique Team,

1. Introduction

Smart Dining is designed for venues like Cape Classique: full-service restaurant, wine bar, and 24-hour room service. Your guests can **order from home** via WhatsApp or **order at the table** with a waiter using a POS device. They can **pay by tapping their card** at the table or **pay via a secure link** sent to them on WhatsApp. Kitchen and bar see orders in real time; managers see sales, orders, and reports on a single dashboard. Everything is connected.

2. How Smart Dining Works

The journey is simple:

- **Order** — Either via WhatsApp (from home or on the go) or via your waiter on a POS device at the table.
- **Prepare** — Orders flow to the kitchen and bar displays in real time; staff mark items as they are prepared.
- **Serve** — Waiters are notified when orders are ready and deliver to the table.
- **Pay** — Guest pays by card (tap on the same POS device) or via a payment link sent to their phone (e.g. WhatsApp), or by cash or mobile money.

The following sections show each step with real screens and devices.

add items, and send their order in a simple conversation. No app download required — just WhatsApp.

Guest places an order via WhatsApp from home or on the go.

How it works

- Guest sends a message to your business WhatsApp number.
- Smart Dining responds with a menu and ordering options (powered by our conversational flow).
- Guest selects items, quantities, and any special requests (e.g. “no onions”, “allergy note”).
- Order is created in your system and sent to the kitchen/bar like any other order.
- Ideal for takeaway, delivery, or “order ahead” before arriving at the restaurant.

What makes our WhatsApp different from flow-based chatbots

Many solutions offer fixed menus and button-only flows. Smart Dining goes further with an **AI concierge** that understands natural language and remembers your guests:

- **Natural conversation** — Guests type in plain language (“I’d like the usual”, “table for four tomorrow at 7”, “I’m allergic to nuts”). No need to follow rigid step-by-step menus.
- **Guest memory** — Returning guests are recognised: preferences, allergies, usual orders, and favourite table are used to personalise replies and avoid suggesting items they can’t have.
- **Bilingual** — The assistant responds in English or Swahili (Kiswahili) depending on how the guest writes.
- **Live staff connection** — When the AI can’t help or the guest asks for a person, requests are handed off to your team. Notifications go to the right role (waiter, kitchen, bar, manager) so nothing is lost.
- **Order changes and cancellations** — Guests can modify or cancel orders in chat (when the kitchen hasn’t started); the system notifies the waiter and kitchen automatically.
- **Receipts and feedback** — Guests can ask for a PDF receipt or share feedback; the AI captures it and can alert managers when feedback is negative.
- **Structured flow when needed** — If preferred or when the AI is unavailable, a clear menu-and-buttons flow is still available so ordering always works.

same device is used later for card payment — one device per waiter for both ordering and payment.

Waiter takes the order on a POS device at the table.

How it works

- Waiter selects the table and adds items from the menu (food to kitchen, drinks to bar).
- Special instructions (e.g. “medium rare”, “no ice”) are captured per item.
- Order is sent instantly to the kitchen and bar displays.
- When the guest is ready to pay, the same device can process card tap or other payment methods.

5. Order Management & Records

Managers and staff see all orders — from WhatsApp, POS, or web — in one place. You can filter by date, table, status, or source (WhatsApp vs POS vs web). Sales reports, order history, and daily summaries are available at a glance.

Manager dashboard: orders, status, and records in one view.

What you get

- Unified list of all orders with status (pending, preparing, ready, delivered, paid).
- Revenue and sales reports (daily, weekly, by payment method).
- Staff performance and tips (for waiters).
- Menu performance (best-selling items, low stock alerts if inventory is enabled).

6. Payment via WhatsApp

When a guest orders via WhatsApp (or when you want to send them the bill remotely), Smart Dining can send a secure payment link to their phone. They open the link and pay by card (or other methods you enable). Once payment is completed, they see a confirmation — and you see the payment in your system and in your bank.

Guest receives payment confirmation on WhatsApp after paying via the link.

How it works

- After the order is ready (or when you choose to send the bill), the system generates a unique payment link.
- The link is sent to the guest via WhatsApp (or SMS).
- Guest opens the link on their phone and pays by card (Stripe) or other configured methods.
- On success, the order is marked paid and the guest gets a confirmation message.
- Ideal for WhatsApp orders, room service, or “pay from your phone” at the table.

their VISA, Mastercard, or other supported card (or inserts chip, or swipes). Payment is processed securely; the merchant receives settlement in their bank account. No need for a separate payment terminal — the same device used for ordering also takes the card.

POS devices and international cards. Not all devices are approved for international card schemes. ZIMA Solutions is in a **pre-agreement stage with NBC Bank**, who will supply POS devices capable of accepting **VISA, Mastercard, and other international cards**. Once the agreement is in place, Cape Classique will be able to offer international visitors and local cardholders a seamless card payment experience at the table, with settlement in TZS in your NBC account. Our platform (Smart Dining) is designed to work with these devices so that waiters use one device for both order-taking and card payment.

Guest taps their card on the POS device at the table.

How it works

- Waiter selects “Pay” on the order and chooses “Card”.
- Device is handed to the guest (or held at the table) for tap, chip, or swipe.
- Transaction is sent to the acquirer (NBC Bank, once the agreement is live); approval is shown on the device.
- Receipt can be printed or sent by email/WhatsApp if configured.
- Devices supplied under our NBC pre-agreement will accept VISA, Mastercard, and other international schemes supported by NBC.

8. Why Smart Dining

?

One system, many channels

WhatsApp, POS, and web in one platform. No separate systems for online vs in-house.

?

Flexible payments

Cash, mobile money, card at table, and payment link via WhatsApp. Suits every guest.

???

Kitchen & bar in sync

Orders appear on kitchen and bar displays in real time; fewer errors, faster service.

Smart Dining is already built and running: table management, menu, orders, payments, reservations, and reports are included. For card-at-table, we are in a **pre-agreement stage with NBC Bank**, who will supply POS devices capable of accepting VISA, Mastercard, and other international cards—so you can offer international card acceptance once the agreement is in place. Our team handles setup, training, and ongoing support so Cape Classique can focus on hospitality.

9. What's Included & Next Steps

We propose the following for Cape Classique:

- **Smart Dining POS platform** — Backend, API, web dashboard (manager, kitchen, bar), and support for Android POS devices for waiters.

- **Payment integration** — Cash, mobile money (e.g. M-Pesa), and online card payments (Stripe). Card-at-table via POS devices: ZIMA is in a **pre-agreement with NBC Bank**, who will supply POS devices capable of accepting **VISA, Mastercard, and other international cards**; once the agreement is finalised, Cape Classique will be able to offer these at the table with settlement in TZS.
- **Training and support** — On-site or remote training for managers, waiters, kitchen and bar; ongoing technical support.

We would be glad to schedule a demo at your premises or online, and to provide a detailed commercial proposal (pricing, timeline, and contract terms) tailored to Cape Classique. Please contact us to arrange a meeting.

Thank you for considering Smart Dining. We look forward to partnering with Cape Classique Restaurant & Wine Bar and to supporting your growth with a modern, integrated POS and ordering experience.

Yours sincerely,

ZIMA Solutions Limited
