Request for Proposal: Supply of POS Devices Capable of Processing VISA, Mastercard and Other International Cards

Dear Sir / Madam,

We are writing to request a formal proposal from NBC Bank for the supply and deployment of Point of Sale (POS) devices at our premises, capable of accepting VISA, Mastercard, and other international card schemes. Our business operates a full restaurant and hospitality management system (Smart Dining / SeaCliff POS) and we wish to offer international visitors and local cardholders a seamless, secure card payment experience at the till.

1. About Our Business

We operate an integrated restaurant and point-of-sale environment that includes table service, kitchen and bar displays, online and WhatsApp ordering, reservations, and multiple payment channels. Our system already supports cash, mobile money (e.g. M-Pesa), and online card payments via gateway. To complete our in-house payment options and better serve international guests and local cardholders, we require physical POS devices that can process chip, contactless, and magstripe transactions for major international card brands at the point of sale.

2. Scope of Requirement

We request NBC Bank to provide:

- **POS terminals (hardware)** suitable for restaurant and hospitality use (e.g. countertop and/or mobile units as appropriate), in quantities to be agreed based on our outlet layout and peak throughput.
- **Card acceptance** for at least:
 - VISA (credit and debit)
 - Mastercard (credit and debit)
 - Other international schemes that NBC supports (e.g. UnionPay, Amex, etc.), where commercially viable.
- **Transaction types:** chip & PIN, contactless (NFC), and magstripe fallback where applicable and compliant with scheme rules.

- **Merchant acquiring services** from NBC Bank for the above card types, including settlement in our preferred account(s) and transparent fee structure.
- **Installation, training, and ongoing support** (e.g. terminal replacement, troubleshooting, and compliance updates) as per NBC's standard merchant terms.

3. Technical and Operational Expectations

- Devices must be PCI-DSS compliant and support secure encryption (e.g. point-to-point encryption) as required by card schemes and NBC.
- Ability to print or email customer receipts; optional integration with our existing POS/receipting system can be discussed in a later phase.
- Stable connectivity (GPRS/3G/4G and/or Ethernet/Wi-Fi) suitable for our location(s).
- Clear SLA for terminal availability and support, and a defined process for reporting and resolving disputes or failed transactions.

4. Benefits to Both Parties

For our business, enabling VISA, Mastercard and other international cards at the POS will increase revenue from tourists and business travellers, reduce cash handling, and align our offering with guest expectations. For NBC Bank, this represents a long-term merchant relationship with a hospitality operator committed to formal banking channels and card acceptance. We are open to discussing volume-based pricing, multi-outlet rollout, and future integration with our back-office systems where NBC's APIs or file-based reporting are available.

5. Next Steps

We request that NBC Bank provide a formal proposal including:

- Recommended POS device model(s), unit cost or rental options, and any one-off setup fees.
- Merchant discount rate (MDR) or fee structure for VISA, Mastercard and other international cards.
- Settlement cycle and currency (e.g. TZS).
- Timeline for site survey (if required), installation, and go-live.
- Terms and conditions, contract duration, and exit clauses.

We are available for a meeting or call at your convenience to walk through our site and transaction volumes. Please indicate a point of contact and preferred next steps.

Thank you for considering this request. We look forward to a lasting partnership with NBC Bank.

Yours faithfully,

Management
